

Currently, the zip files provided are for a **Web Site**. If you would like to install this on a **Web Application**, you have to do a few extra things.

#### **Conversion instructions for the Full Tool Installation:**

1. Run through the normal Import Package Instructions
2. Once you get to the end of the installation wizard and receive the message about *"This is a Web Application, you need to move files from cmstemp to ..."*. Stop and ignore those instructions and do the following.
3. Download and install the ManualInstall.zip
4. From the zip file, **copy** the following dlls from the **bin** folder to the **Lib** folder of your project:
  1. BizStreamToolkit.Core.dll
  2. BizStreamToolkit.Agent.dll
  3. BizStreamToolkit.Tool.dll
5. **Copy** all of the *other folders* (exclude the bin folder) from the zip to the **CMS** folder root of your project:
  1. App\_Data
  2. CMSFormControls
  3. CMSModules
  4. CMSPages
  5. CMSResources
6. **Open** your solution file (.sln)
7. Include the files that did not exist in the project before the import:
  1. Click **Show all files** at the top of the Solution Explorer.
  2. Locate the newly added files.
  3. Right-click each of the files and select **Include in Project**.
8. Right-click the following aspx and ascx files and select **Convert to Web Application**:
  1. CMSFormControls/BizStreamToolkitTools/AgentInstallationControl.ascx
  2. CMSModules/BizStreamToolkitTools/Common/SettingsRedirect.aspx
  3. CMSModules/BizStreamToolkitTools/Compare/Comparision\_Details.aspx
  4. CMSModules/BizStreamToolkitTools/Compare/Comparision\_Results.aspx
  5. CMSModules/BizStreamToolkitTools/Compare/Deployment\_Report.aspx
9. **Rebuild the solution**

*For more info, check out Kentico's documentation:*

<https://docs.kentico.com/display/K8/Importing+to+web+application+projects>

*Note: There are plans to create a Web Application Installation zip in the near future.*
